ANTI AGEING & LASER CLINIC

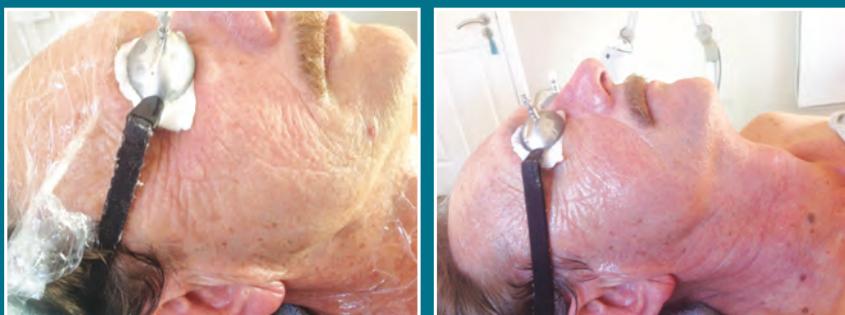

"My skin was starting to show its 'use-by' date and long past its 'sell-by date', I needed to update my knowledge base on lasers and skin therapy.

Years ago my dermatologist suggested laser therapy for my skin and I thought he had lost it. I had never heard of laser therapy for one's face, and it sounded quite dangerous. In the science fiction movies, laser beams cut through everything, can destroy anything, burn things to ashes and I quite liked my face. Well, enough not to want to destroy it.

Instead of destroying skin, laser treatment is gentle enough to rejuvenate the loss of elasticity of ageing skin and is great for stimulating new collagen production to plump up skin and improve one's looks. Great! We were back in business and I was going to laser years off my chronological age."

Take years off your face with just one treatment.

One Treatment- One month later

Facial wrinkles are seen by many as an inevitable part of the aging process. However, many lifestyle factors are responsible for people developing wrinkles prematurely and more severely than their genetics would otherwise dictate. Smoking and excessive UV exposure--sunbathing--are the prime culprits.

Botox is one of the first things people think of when considering wrinkle reduction. However, Botox is not suitable for all wrinkles and not the best option for others.

A POWERFUL TREATMENT OPTION FOR ALL KINDS OF WRINKLES.

Collagen and elastin make up the support structure in our skin. As we age that support structure weakens and wrinkles form. Laser wrinkle treatment uses powerful laser technology to renew the skin by stimulating collagen and elastin production. It works fast to minimize wrinkles and improve the skin on your neck and cheeks, smooth away smokers lines around your mouth, and even reduce wrinkles and crow's feet around your eyes.

AN EASIER WRINKLE TREATMENT THAN SURGERY.

Unlike surgical face-lifts that require long recovery times, laser wrinkle treatment is a nonsurgical alternative that has less downtime allowing you to recover in as little as a few days with minimal discomfort or side effects.

NATURAL LOOKING RESULTS THAT YOU'LL BE PROUD TO SHOW OFF.

Laser wrinkle treatment smooths your skin without changing your looks. You look like yourself - but with more youthful looking skin - and without the facial changes and side effects that can be associated with surgical facelifts or injections.

CLINICAL APPLICATIONS

Scientists have discovered that light and laser energy can be used to heat deeper layers of the skin. This procedure activates fibroblasts that stimulate the formation of new collagen as well as tightening existing collagen over time.

The Palomar 1540nm Non- Ablative Fractionated Laser:

One of the premier anti-ageing lasers is the Palomar Lux 1540, a non-ablative erbium laser. This laser delivers light to the skin through an array of high precision micro-beams that penetrate the skin deep into the dermis. Creating narrow, deep columns of skin coagulation, surrounded by healthy, untreated skin. This causes the skin to repair itself by replacing old, sun damaged skin with new, younger skin. Since the Lux 1540 delivers fractionated light, the treatments are safer and produce consistent results. The downtime to these treatments are like mild sunburn for a couple of days.

The Palomar Max G- Optical pulsed light:

For the treatment of undesirable pigmentation on face, neck, chest, and body, also treating rosacea, broken capillaries and veins. OPL treatments achieves a more youthful appearance as a result of sun damage. With longer wavelengths these treatments delivers great results with minimal pain or downtime.

Results one month later with IPL and an Alpha peel

A POWERFUL COMBINATION:

Background: A recent study compared facial rejuvenation with a combined treatment using an optimized pulsed light (OPL) source followed by a non-ablative, fractional 1540nm laser to treatment with the laser alone.

Conclusion: Facial rejuvenation combining 1540nm laser and OPL was found to be a safe and effective treatment for photoaging that provides enhanced cosmetic results in a shorter time-course for pigment improvement than the 1540nm laser alone.

BUT THERE'S MORE!

In addition to these treatments, mild peeling can be done to gently polish the skin to improve texture, whilst a radiofrequency (Tripollar) procedure tightens sagging skin.

The combination of Rejuvenation therapies treats all three layers of the skin, each treatment has synergistic rejuvenating effects on the whole face and neck. It increases the amount of collagen in the dermis which shrinks pores, tightens sagging skin and retextures that dull and sallow complexion. Although the full effect will take about three months to be fully appreciated, each treatment will have a cumulative beneficial effect and skin will continue to improve over the next nine months.

By adding Dermal Fillers to add lost volume and Botox to relax those frown muscles one can look 10 years younger in one treatment!

This great combination of treatments is tailored to each person's needs. So Book your complimentary consultation today!

It's a great treat for your skin and a marvelous boost for your self-image!
